

Transcript: Fidelity Checklist Overview (Targeted Behavior Supports)

00:00

as you work through the targeted

00:01

supports training you will cover each of

00:04

the interventions that are listed on the

00:06

sim or student intervention matching

00:08

form for each intervention that we cover

00:11

you will receive a fidelity checklist

00:13

the format for each checklist will be

00:16

similar so we're going to go over the

00:17

format quickly before you begin you will

00:20

notice at the top of each fidelity

00:22

checklist there's the name of the

00:23

intervention followed by a rationale or

00:27

short description of the intervention

00:28

there are essentially two different ways

00:31

that you can use the checklist you can

00:33

initially use the checklist when you're

00:35

planning to implement the intervention

00:37

for the student to make sure all staff

00:39

are trained and ready to implement the

00:42

intervention the second use is once the

00:44

intervention is in place you can take

00:47

some data on how consistently the

00:49

intervention is being implemented so

00:52

when you scroll down through the

00:53

fidelity checklist you'll notice on the

00:55

left-hand side there's a column titled

00:57

step this column will include all the

01:00

steps needed for preparation teaching

01:02

and implementation of the intervention

01:04

some forms will divide that into

01:07

separate sections some will have it all

01:09

in one section the important thing to

01:11

remember is that it will include all the

01:13

steps needed to implement the

01:15

intervention on the right hand side

01:17

you'll notice a column title did I

01:19

complete this step this column is where

01:22

once the intervention is in place you

01:24

take some data on how consistently those

01:27

steps are being used so you circle yes

01:30

if the step is being followed no if the

01:33

step is not being followed or is only

01:35

partially being implemented then when

01:38

you scroll down to the bottom you can

01:40

total the number of yeses and calculate

01:43

a percentage of yeses which indicates

01:45

how consistently the intervention is

01:47

being implemented so the higher

01:49

percentage indicates more consistent

01:52

implementation of all the steps involved

01:54

in the intervention
