

00:00

Once you've completed the SIM form it's time to calculate scores for each of the interventions

00:06

to determine which evidence based intervention or interventions might work best for your

00:10

student you may have noticed that by each item on the SIM form there are some letters

00:16

in parentheses at the end of the item these letters correspond to the intervention that

00:22

that item relates to so if you scroll down to the third page of the form there's a section

00:28

for scoring each one of the interventions associated with the SIM form are listed in

00:33

the left-hand column so are the letters that are associated with that intervention In the

00:40

middle column you have the item numbers from the form that are associated with that intervention

00:45

so what we're going to do now is for Miss Raino's responses to look at what might be

00:51

the most appropriate interventions for Ava so any intervention getting a 6 or higher

00:57

might be an appropriate intervention for the student so we know that items 1,6 and 13 are

01:05

associated with school home note so we're going to scroll up and look at 1,6 and 13

01:13

so as you can see for number one the item was rated as true which is 2 points so we're

01:19

going to remember two then we're going to look at item number 6 that one was rated also

01:27

as true so that's two which makes four total so far and then we're going to do number 13

01:36

see it has SHN for school home note there and we're going to look over and that one

01:42

was rated untrue which is a one so we have a two a two and a one as our ratings for this

01:49

intervention so we're going to put in a two a two and one which gives us a some score

01:58

of 5 for school home note so that tells us that school home note may not be the best

02:05

intervention to choose for Ava so we're going to follow the same steps for all of the other

02:11

interventions so let's do Behavior Contract or 16 and 21 you don't want to remember the

02:17

numbers you can just scroll through the items and find all of the ones that are labeled

02:22

BC so when we come back up here we're going to look through we'll just start at the beginning

02:28

and find the BCs there's four so it was rated a 2 so we're going to remember a 2 the

02:35

next BC is where we have a two is right here 16 and that one was rated very high so that's

02:48

a 3 and 21 was also a 2 so we have 2 a 3 and a 2 so we're going to come down here put in

03:01

the two the 3 and the 2 and we add those together we get a 7 so Behavior contract 7 is higher

03:15

than 6 so it might be a reasonable intervention for Ava let's look at self-monitoring 10 12

03:22

and 18 so for 10 we have a 1 and 12 we have another one so we have two ones and then for

03:38

18 we have another one so that's three ones that we're going to put down here for self-monitoring

03:48

so one one gives us a sum score of 3 so self-monitoring may not be a great choice for Ava next to

03:59

check-in check-out 2, 9 and 17 so if we go up here and look at number 2 that is rated

04:05

at 3 so we have a 3 and 9 that was rated at 2 so we have a 3 and a two scroll down to

04:17

the last CICO and that was at 2 so we have three a two and a two lets put those in which

04:27

gives a sum score of 7 7 is greater than 6 so that is an intervention that may be appropriate

04:36

for Ava Positive peer reporting items 3, 11 and 20 so let's take a look at 3 we have a

04:45

zero associated with that so that's a zero our next one for positive peer reporting is

04:54

11 that's another zero so two 0s so far and then our last one is item 20 is don't know

05:03

which we're also going to score as a zero so we have three zeros for positive peer reporting

05:12

which indicates of course that this would not be a great intervention choice for Ava

05:17

next is classpass interventions of 5, 8 and 15 let's take a look at those number five

05:26

is one 8 if we look here is also a one so we have two ones and then number 15 is also

05:37

one so we have three ones for Class pass so we put a 1, 1, 1 for a total score of 3 indicating

05:49

classpass may not be the best intervention for Ava next we're going to look at small

05:55

group social emotional training 7, 14 and 19 so when we look at 7 that's a 0 so we have

06:04

1, 0 14 is a 1, so 0 and 1 and then 19 is a 1 so we have 0, 1, 1 for a sum score of

06:22

two so after we went through and calculated the sum scores for each of these interventions

06:28

it tells us that we have two choices to consider for Ava which is behavior contract and check-in

06:35
check-out
