FREQUENCY/RATE DATA SHEET

Student:		Observer:	
Setting:		School:	

Behavior Definition:

Directions: Record the date and time the observation begins and ends. Tally each time the behavior occurs during the observation period under the frequency column. Total the number of times the behavior occurred during the observation period and the amount of time (minutes) the observation lasted. To calculate rate, divide the number of times the behavior occurred by the total amount of time observed (= times per minute).

DATE:	Time Begin:	Frequency:	Total Frequency:	Total Time Observed:
	Time End:		Rate: (Frequency/Time)	
DATE:	Time Begin:	Frequency:	Total Frequency:	Total Time Observed:
	Time End:		Rate: (Frequency/Time)	
DATE:	Time Begin:	Frequency:	Total Frequency:	Total Time Observed:
	Time End:		Rate: (Frequency/Time)	
DATE:	Time Begin:	Frequency:	Total Frequency:	Total Time Observed:
	Time End:		Rate: (Frequency/Time)	
DATE:	Time Begin:	Frequency:	Total Frequency:	Total Time Observed:
	Time End:		Rate: (Frequency/Time)
